Symbol	JPM
Fiscal Year	12/31

The information in this preliminary pricing supplement is not complete and may be changed. This preliminary pricing supplement is not an offer to sell nor does it seek an offer to buy these securities in any jurisdiction where the offer or sale is not permitted.
Subject to completion dated May 4, 2026

May , 2026

Registration Statement Nos. 333-293684 and 333-293684-01; Rule 424(b)(2)

JPMorgan Chase Financial Company LLC
Structured Investments

J.P.Morgan

Auto Callable Accelerated Barrier Notes Linked to the iShares[®] Ethereum Trust ETF due June 1, 2029

Fully and Unconditionally Guaranteed by JPMorgan Chase & Co.

- The notes are designed for investors who seek early exit prior to maturity at a premium if, on the Review Date, the closing price of one share of the iShares[®] Ethereum Trust ETF, which we refer to as the Fund, is at or above the Call Value.
- The date on which an automatic call may be initiated is June 1, 2027.
- The notes are also designed for investors who seek an uncapped return of 1.50 *times* any appreciation of the Fund at maturity, if the notes have not been automatically called.
- Investors should be willing to forgo interest payments and be willing to lose a significant portion or all of their principal amount at maturity.
- The notes are unsecured and unsubordinated obligations of JPMorgan Chase Financial Company LLC, which we refer to as JPMorgan Financial, the payment on which is fully and unconditionally guaranteed by JPMorgan Chase & Co. **Any payment on the notes is subject to the credit risk of JPMorgan Financial, as issuer of the notes, and the credit risk of JPMorgan Chase & Co., as guarantor of the notes.**
- Investors should be knowledgeable about the risks associated with cryptocurrencies and digital assets because the Fund seeks to reflect generally the performance of the price of ether and therefore the notes involve significant risks in investments tracking cryptocurrencies. **Ether has historically exhibited high price volatility relative to more traditional asset classes and has experienced extreme volatility in recent periods and may continue to do so, which may increase the volatility of the Fund.**
- Minimum denominations of \$1,000 and integral multiples thereof
- The notes are expected to price on or about May 26, 2026 and are expected to settle on or about May 29, 2026.
- CUSIP: 46660TNU0

Investing in the notes involves a number of risks. See “Risk Factors” beginning on page S-2 of the accompanying prospectus supplement, “Risk Factors” beginning on page PS-12 of the accompanying product supplement and “Selected Risk Considerations” beginning on page PS-5 of this pricing supplement.

Neither the Securities and Exchange Commission (the “SEC”) nor any state securities commission has approved or disapproved of the notes or passed upon the accuracy or the adequacy of this pricing supplement or the accompanying product supplement, underlying supplement, prospectus supplement and prospectus. Any representation to the contrary is a criminal offense.

	Price to Public (1)	Fees and Commissions (2)	Proceeds to Issuer
Per note	\$1,000	\$	\$
Total	\$	\$	\$

(1) See “Supplemental Use of Proceeds” in this pricing supplement for information about the components of the price to public of the notes.

(2) J.P. Morgan Securities LLC, which we refer to as JPMS, acting as agent for JPMorgan Financial, will pay all of the selling commissions it receives from us to other affiliated or unaffiliated dealers. In no event will these selling commissions exceed \$32.50 per \$1,000 principal amount note. See “Plan of Distribution (Conflicts of Interest)” in the accompanying product supplement.

If the notes priced today, the estimated value of the notes would be approximately \$928.20 per \$1,000 principal amount note. The estimated value of the notes, when the terms of the notes are set, will be provided in the pricing supplement and will not be less than \$900.00 per \$1,000 principal amount note. See “The Estimated Value of the Notes” in this pricing supplement for additional information.

The notes are not bank deposits, are not insured by the Federal Deposit Insurance Corporation or any other governmental agency and are not obligations of, or guaranteed by, a bank.

Key Terms

Issuer: JPMorgan Chase Financial Company LLC, a direct, wholly owned finance subsidiary of JPMorgan Chase & Co.

Guarantor: JPMorgan Chase & Co.

Fund: The iShares® Ethereum Trust ETF (Bloomberg ticker: ETHA)

Call Premium Amount: At least \$325.00 per \$1,000 principal amount note (to be provided in the pricing supplement)

Call Value: 100.00% of the Initial Value

Upside Leverage Factor: 1.50

Barrier Amount: 60.00% of the Initial Value

Pricing Date: On or about May 26, 2026

Original Issue Date (Settlement Date): On or about May 29, 2026

Review Date*: June 1, 2027

Call Settlement Date*: June 4, 2027

Observation Date*: May 29, 2029

Maturity Date*: June 1, 2029

* Subject to postponement in the event of a market disruption event and as described under “General Terms of Notes — Postponement of a Determination Date — Notes Linked to a Single Underlying — Notes Linked to a Single Underlying (Other Than a Commodity Index)” and “General Terms of Notes — Postponement of a Payment Date” in the accompanying product supplement or early acceleration in the event of an acceleration event as described under “General Terms of Notes — Consequences of an Acceleration Event” in the accompanying product supplement and “Selected Risk Considerations — Risks Relating to the Notes Generally — We May Accelerate Your Notes If an Acceleration Event Occurs” in this pricing supplement

Automatic Call:

If the closing price of one share of the Fund on the Review Date is greater than or equal to the Call Value, the notes will be automatically called for a cash payment, for each \$1,000 principal amount note, equal to (a) \$1,000 *plus* (b) the Call Premium Amount, payable on the Call Settlement Date. No further payments will be made on the notes.

If the notes are automatically called, you will not benefit from the Upside Leverage Factor that applies to the payment at maturity if the Final Value is greater than the Initial Value. Because the Upside Leverage Factor does not apply to the payment upon an automatic call, the payment upon an automatic call may be significantly less than the payment at maturity for the same level of appreciation in the Fund.

Payment at Maturity:

If the notes have not been automatically called and the Final Value is greater than the Initial Value, your payment at maturity per \$1,000 principal amount note will be calculated as follows:

$$\$1,000 + (\$1,000 \times \text{Fund Return} \times \text{Upside Leverage Factor})$$

If the notes have not been automatically called and the Final Value is equal to the Initial Value or is less than the Initial Value but greater than or equal to the Barrier Amount, you will receive the principal amount of your notes at maturity.

If the notes have not been automatically called and the Final Value is less than the Barrier Amount, your payment at maturity per \$1,000 principal amount note will be calculated as follows:

$$\$1,000 + (\$1,000 \times \text{Fund Return})$$

If the notes have not been automatically called and the Final Value is less than the Barrier Amount, you will lose more than 40.00% of your principal amount at maturity and could lose all of your principal amount at maturity.

Fund Return:

$$\frac{(\text{Final Value} - \text{Initial Value})}{\text{Initial Value}}$$

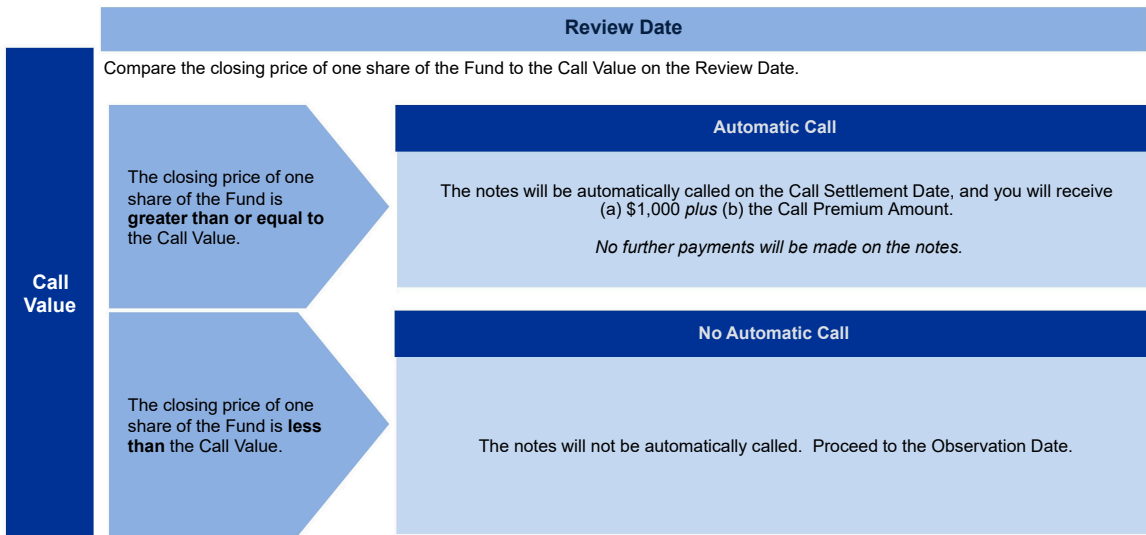

Initial Value: The closing price of one share of the Fund on the Pricing Date

Final Value: The closing price of one share of the Fund on the Observation Date

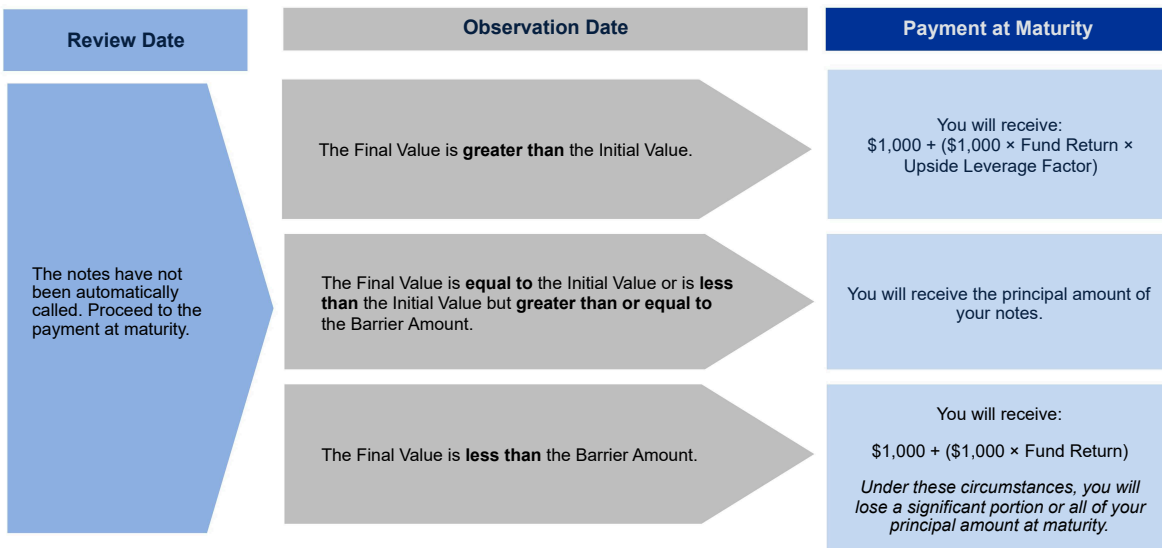

Share Adjustment Factor: The Share Adjustment Factor is referenced in determining the closing price of one share of the Fund and is set equal to 1.0 on the Pricing Date. The Share Adjustment Factor is subject to adjustment upon the occurrence of certain events affecting the Fund. See “The Underlyings — Funds — Anti-Dilution Adjustments” in the accompanying product supplement for further information.

Hypothetical Payout Profile

Payment upon an Automatic Call

Payment at Maturity If the Notes Have Not Been Automatically Called

Call Premium Amount

The Call Premium Amount per \$1,000 principal amount note if the notes are automatically called will be provided in the pricing supplement and will not be less than \$325.00.

Payment at Maturity If the Notes Have Not Been Automatically Called

The following table illustrates the hypothetical total return and payment at maturity on the notes linked to a hypothetical Fund if the notes have not been automatically called. The “total return” as used in this pricing supplement is the number, expressed as a percentage, that results from comparing the payment at maturity per \$1,000 principal amount note to \$1,000. The hypothetical total returns and payments set forth below assume the following:

- the notes have not been automatically called;
- an Initial Value of \$100.00;
- an Upside Leverage Factor of 1.50; and
- a Barrier Amount of \$60.00 (equal to 60.00% of the hypothetical Initial Value).

The hypothetical Initial Value of \$100.00 has been chosen for illustrative purposes only and may not represent a likely actual Initial Value. The actual Initial Value will be the closing price of one share of the Fund on the Pricing Date and will be provided in the pricing supplement. For historical data regarding the actual closing prices of one share of the Fund, please see the historical information set forth under “The Fund” in this pricing supplement.

Each hypothetical total return or hypothetical payment at maturity set forth below is for illustrative purposes only and may not be the actual total return or payment at maturity applicable to a purchaser of the notes. The numbers appearing in the following table have been rounded for ease of analysis.

Final Value	Fund Return	Total Return on the Notes	Payment at Maturity
\$165.00	65.00%	97.50%	\$1,975.00
\$150.00	50.00%	75.00%	\$1,750.00
\$140.00	40.00%	60.00%	\$1,600.00
\$130.00	30.00%	45.00%	\$1,450.00
\$120.00	20.00%	30.00%	\$1,300.00
\$110.00	10.00%	15.00%	\$1,150.00
\$105.00	5.00%	7.50%	\$1,075.00
\$101.00	1.00%	1.50%	\$1,015.00
\$100.00	0.00%	0.00%	\$1,000.00
\$95.00	-5.00%	0.00%	\$1,000.00
\$90.00	-10.00%	0.00%	\$1,000.00
\$80.00	-20.00%	0.00%	\$1,000.00
\$70.00	-30.00%	0.00%	\$1,000.00
\$60.00	-40.00%	0.00%	\$1,000.00
\$59.99	-40.01%	-40.01%	\$599.90
\$50.00	-50.00%	-50.00%	\$500.00
\$40.00	-60.00%	-60.00%	\$400.00
\$30.00	-70.00%	-70.00%	\$300.00
\$20.00	-80.00%	-80.00%	\$200.00
\$10.00	-90.00%	-90.00%	\$100.00
\$0.00	-100.00%	-100.00%	\$0.00

How the Notes Work

Upside Scenario If Automatic Call:

If the closing price of one share of the Fund on the Review Date is greater than or equal to the Call Value, the notes will be automatically called and investors will receive on the Call Settlement Date the \$1,000 principal amount *plus* the Call Premium Amount of at least \$325.00. No further payments will be made on the notes.

- Assuming a hypothetical Call Premium Amount of \$325.00, if the closing price of one share of the Fund increases 65.00% as of the Review Date, the notes will be automatically called and investors will receive a return equal to 32.50%, or \$1,325.00 per \$1,000 principal amount note.

Upside Scenario If No Automatic Call:

If the notes have not been automatically called and the Final Value is greater than the Initial Value, investors will receive at maturity the \$1,000 principal amount *plus* a return equal to the Fund Return *times* the Upside Leverage Factor of 1.50.

- If the notes have not been automatically called and the closing price of one share of the Fund increases 5.00%, investors will receive at maturity a return equal to 7.50%, or \$1,075.00 per \$1,000 principal amount note.

Par Scenario:

If the notes have not been automatically called and the Final Value is equal to the Initial Value or is less than the Initial Value but greater than or equal to the Barrier Amount of 60.00% of the Initial Value, investors will receive at maturity the principal amount of their notes.

Downside Scenario:

If the notes have not been automatically called and the Final Value is less than the Barrier Amount of 60.00% of the Initial Value, investors will lose 1% of the principal amount of their notes for every 1% that the Final Value is less than the Initial Value.

- For example, if the notes have not been automatically called and the closing price of one share of the Fund declines 60.00%, investors will lose 60.00% of their principal amount and receive only \$400.00 per \$1,000 principal amount note at maturity.

The hypothetical returns and hypothetical payments on the notes shown above apply **only if you hold the notes for their entire term or until automatically called**. These hypotheticals do not reflect the fees or expenses that would be associated with any sale in the secondary market. If these fees and expenses were included, the hypothetical returns and hypothetical payments shown above would likely be lower.

Selected Risk Considerations

An investment in the notes involves significant risks. These risks are explained in more detail in the “Risk Factors” sections of the accompanying prospectus supplement and product supplement.

Risks Relating to the Notes Generally

- **YOUR INVESTMENT IN THE NOTES MAY RESULT IN A LOSS —**

The notes do not guarantee any return of principal. If the notes have not been automatically called and the Final Value is less than the Barrier Amount, you will lose 1% of the principal amount of your notes for every 1% that the Final Value is less than the Initial Value. Accordingly, under these circumstances, you will lose more than 40.00% of your principal amount at maturity and could lose all of your principal amount at maturity.
- **CREDIT RISKS OF JPMORGAN FINANCIAL AND JPMORGAN CHASE & CO. —**

Investors are dependent on our and JPMorgan Chase & Co.’s ability to pay all amounts due on the notes. Any actual or potential change in our or JPMorgan Chase & Co.’s creditworthiness or credit spreads, as determined by the market for taking that credit risk, is likely to adversely affect the value of the notes. If we and JPMorgan Chase & Co. were to default on our payment obligations, you may not receive any amounts owed to you under the notes and you could lose your entire investment.
- **AS A FINANCE SUBSIDIARY, JPMORGAN FINANCIAL HAS NO INDEPENDENT ACTIVITIES AND HAS LIMITED ASSETS —**

As a finance subsidiary of JPMorgan Chase & Co., we have no independent activities beyond the issuance and administration of our securities and the collection of intercompany obligations. Aside from the initial capital contribution from JPMorgan Chase & Co., substantially all of our assets relate to obligations of JPMorgan Chase & Co. to make payments under loans made by us to JPMorgan Chase & Co. or under other intercompany agreements. As a result, we are dependent upon payments from JPMorgan Chase & Co. to meet our obligations under the notes. We are not an operating subsidiary of JPMorgan Chase & Co. and in a bankruptcy or resolution of JPMorgan Chase & Co. we are not expected to have sufficient resources to meet our obligations in respect of the notes as they come due. If JPMorgan Chase & Co. does not make payments to us and we are unable to make payments on the notes, you may have to seek payment under the related guarantee by JPMorgan Chase & Co., and that guarantee will rank *pari passu* with all other unsecured and unsubordinated obligations of JPMorgan Chase & Co. For more information, see “Risk Factors — Holders of securities issued by JPMorgan Financial may be subject to losses if JPMorgan Chase & Co. were to enter into a resolution” in the accompanying prospectus supplement.
- **IF THE NOTES ARE AUTOMATICALLY CALLED, THE APPRECIATION POTENTIAL OF THE NOTES IS LIMITED TO THE CALL PREMIUM AMOUNT PAID ON THE NOTES,**

regardless of any appreciation of the Fund, which may be significant. In addition, if the notes are automatically called, you will not benefit from the Upside Leverage Factor that applies to the payment at maturity if the Final Value is greater than the Initial Value. Because the Upside Leverage Factor does not apply to the payment upon an automatic call, the payment upon an automatic call may be significantly less than the payment at maturity for the same level of appreciation in the Fund.
- **THE BENEFIT PROVIDED BY THE BARRIER AMOUNT MAY TERMINATE ON THE OBSERVATION DATE —**

If the Final Value is less than the Barrier Amount and the notes have not been automatically called, the benefit provided by the Barrier Amount will terminate and you will be fully exposed to any depreciation of the Fund.
- **THE AUTOMATIC CALL FEATURE MAY FORCE A POTENTIAL EARLY EXIT —**

If your notes are automatically called, the term of the notes may be reduced to as short as approximately one year. There is no guarantee that you would be able to reinvest the proceeds from an investment in the notes at a comparable return for a similar level of risk. Even in cases where the notes are called before maturity, you are not entitled to any fees and commissions described on the front cover of this pricing supplement.
- **THE NOTES DO NOT PAY INTEREST.**

- **YOU WILL NOT HAVE ANY RIGHTS WITH RESPECT TO THE FUND OR ITS UNDERLYING ASSET.**
- **THE RISK OF THE CLOSING PRICE OF ONE SHARE OF THE FUND FALLING BELOW THE BARRIER AMOUNT IS GREATER IF THE PRICE OF ONE SHARE OF THE FUND IS VOLATILE.**

- **WE MAY ACCELERATE YOUR NOTES IF AN ACCELERATION EVENT OCCURS —**

Upon the announcement or occurrence of an acceleration event, we may, in our sole and absolute discretion, accelerate the payment on your notes and pay you an amount determined by the calculation agent in good faith and in a commercially reasonable manner by reference to the values of any fixed-income debt component and any derivatives underlying the economic terms of the notes as of the date of the notice of acceleration. An acceleration event means a Fund is delisted, liquidated or otherwise terminated and the calculation agent determines, in its sole discretion, that no successor fund is available. If the payment on your notes is accelerated, your investment may result in a loss, and you may not be able to reinvest your money in a comparable investment. Please see “The Underlyings — Funds — Discontinuation or Modification of a Fund” in the accompanying product supplement for more information.

- **LACK OF LIQUIDITY —**

The notes will not be listed on any securities exchange. Accordingly, the price at which you may be able to trade your notes is likely to depend on the price, if any, at which JPMS is willing to buy the notes. You may not be able to sell your notes. The notes are not designed to be short-term trading instruments. Accordingly, you should be able and willing to hold your notes to maturity.

- **THE FINAL TERMS AND VALUATION OF THE NOTES WILL BE PROVIDED IN THE PRICING SUPPLEMENT —**

You should consider your potential investment in the notes based on the minimums for the estimated value of the notes and the Call Premium Amount.

Risks Relating to Conflicts of Interest

- **POTENTIAL CONFLICTS —**

We and our affiliates play a variety of roles in connection with the notes. In performing these duties, our and JPMorgan Chase & Co.’s economic interests are potentially adverse to your interests as an investor in the notes. It is possible that hedging or trading activities of ours or our affiliates in connection with the notes could result in substantial returns for us or our affiliates while the value of the notes declines. Please refer to “Risk Factors — Risks Relating to Conflicts of Interest” in the accompanying product supplement.

Risks Relating to the Estimated Value and Secondary Market Prices of the Notes

- **THE ESTIMATED VALUE OF THE NOTES WILL BE LOWER THAN THE ORIGINAL ISSUE PRICE (PRICE TO PUBLIC) OF THE NOTES —**

The estimated value of the notes is only an estimate determined by reference to several factors. The original issue price of the notes will exceed the estimated value of the notes because costs associated with selling, structuring and hedging the notes are included in the original issue price of the notes. These costs include the selling commissions, the projected profits, if any, that our affiliates expect to realize for assuming risks inherent in hedging our obligations under the notes, the estimated cost of hedging our obligations under the notes and the fees, if any, paid for third-party data analytics and/or electronic platform services. See “The Estimated Value of the Notes” in this pricing supplement.

- **THE ESTIMATED VALUE OF THE NOTES DOES NOT REPRESENT FUTURE VALUES OF THE NOTES AND MAY DIFFER FROM OTHERS’ ESTIMATES —**

See “The Estimated Value of the Notes” in this pricing supplement.

- **THE ESTIMATED VALUE OF THE NOTES IS DERIVED BY REFERENCE TO AN INTERNAL FUNDING RATE —**

The internal funding rate used in the determination of the estimated value of the notes may differ from the market-implied funding rate for vanilla fixed income instruments of a similar maturity issued by JPMorgan Chase & Co. or its affiliates. Any difference may be based on, among other things, our and our affiliates’ view of the funding value of the notes as well as the higher issuance, operational and ongoing liability management costs of the notes in comparison to those costs for the conventional fixed income instruments of JPMorgan Chase & Co. This internal funding rate is based on certain market inputs and assumptions, which may prove to be incorrect, and is intended to approximate the prevailing market replacement funding rate for the notes. The use of an internal funding rate and any potential changes to that rate may have an adverse effect on the terms of the notes and any secondary market prices of the notes. See “The Estimated Value of the Notes” in this pricing supplement.

- **THE VALUE OF THE NOTES AS PUBLISHED BY JPMS (AND WHICH MAY BE REFLECTED ON CUSTOMER ACCOUNT STATEMENTS) MAY BE HIGHER THAN THE THEN-CURRENT ESTIMATED VALUE OF THE NOTES FOR A LIMITED TIME PERIOD —**

We generally expect that some of the costs included in the original issue price of the notes will be partially paid back to you in connection with any repurchases of your notes by JPMS in an amount that will decline to zero over an initial predetermined period. See “Secondary Market Prices of the Notes” in this pricing supplement for additional information relating to this initial period. Accordingly, the estimated value of your notes during this initial period may be lower than the value of the notes as published by JPMS (and which may be shown on your customer account statements).

- **SECONDARY MARKET PRICES OF THE NOTES WILL LIKELY BE LOWER THAN THE ORIGINAL ISSUE PRICE OF THE NOTES —**

Any secondary market prices of the notes will likely be lower than the original issue price of the notes because, among other things, secondary market prices take into account our internal secondary market funding rates for structured debt issuances and, also, because secondary market prices may exclude selling commissions, projected hedging profits, if any, estimated hedging costs and fees, if any, paid for third-party data analytics and/or electronic platform services that are included in the original issue price of the notes. As a result, the price, if any, at which JPMS will be willing to buy the notes from you in secondary market transactions, if at all, is likely to be lower than the original issue price. Furthermore, if you sell your notes, you will likely be charged a commission for secondary market transactions, or the price will likely reflect a dealer discount and/or fees for use of an electronic platform to facilitate secondary market activity. Any sale by you prior to the Maturity Date could result in a substantial loss to you.

- **SECONDARY MARKET PRICES OF THE NOTES WILL BE IMPACTED BY MANY ECONOMIC AND MARKET FACTORS —**

The secondary market price of the notes during their term will be impacted by a number of economic and market factors, which may either offset or magnify each other, aside from the selling commissions, projected hedging profits, if any, estimated hedging costs and the price of one share of the Fund. Additionally, independent pricing vendors and/or third party broker-dealers may publish a price for the notes, which may also be reflected on customer account statements. This price may be different (higher or lower) than the price of the notes, if any, at which JPMS may be willing to purchase your notes in the secondary market. See “Risk Factors — Risks Relating to the Estimated Value and Secondary Market Prices of the Notes — Secondary market prices of the notes will be impacted by many economic and market factors” in the accompanying product supplement.

Risks Relating to the Fund

- **THE FUND IS NOT AN INVESTMENT COMPANY OR A COMMODITY POOL AND WILL NOT BE SUBJECT TO REGULATION UNDER THE INVESTMENT COMPANY ACT OF 1940, AS AMENDED, OR THE COMMODITY EXCHANGE ACT, AS AMENDED —**

Accordingly, you will not benefit from any regulatory protections afforded to persons who invest in regulated investment companies or commodity pools.

- **THE PERFORMANCE AND MARKET VALUE OF THE FUND, PARTICULARLY DURING PERIODS OF MARKET VOLATILITY, MAY NOT CORRELATE WITH THE PERFORMANCE OF THE FUND’S UNDERLYING ASSET AS WELL AS THE NET ASSET VALUE PER SHARE —**

The Fund does not fully replicate the performance of ether, which we refer to as the underlying asset with respect to the Fund, due to the fees and expenses charged by the Fund or by restrictions on access to the underlying asset due to other circumstances. Additionally, there is a risk that part or all of the Fund’s holdings in its underlying asset could be lost, stolen or destroyed. Access to the Fund’s underlying asset could also be restricted by natural events (such as an earthquake) or human actions (such as a terrorist attack or cyberattack). All of these factors may lead to a lack of correlation between the performance of the Fund and its underlying asset. In addition, because the shares of the Fund are traded on a securities exchange and are subject to market supply and investor demand, the market value of one share of the Fund may differ from the net asset value per share of the Fund.

During periods of market volatility, the Fund's underlying asset may be unavailable in the secondary market, market participants may be unable to calculate accurately the net asset value per share of the Fund and the liquidity of the Fund may be adversely affected. This kind of market volatility may also disrupt the ability of market participants to create and redeem shares of the Fund. Further, market volatility may adversely affect, sometimes materially, the prices at which market participants are willing to buy and sell shares of the Fund. As a result, under these circumstances, the market value of shares of the Fund may vary substantially from the net asset value per share of the Fund. For all of the foregoing reasons, the performance of the Fund may not correlate with the performance of its underlying asset as well as the net asset value per share of the Fund, which could materially and adversely affect the value of the notes in the secondary market and/or reduce any payment on the notes.

- **VOLATILITY RISK —**

Greater expected volatility with respect to the Fund indicates a greater likelihood as of the Pricing Date that the Final Value could be less than the Barrier Amount if the notes have not been automatically called. The Fund's volatility, however, can change significantly over the term of the notes. The closing price of one share of the Fund could fall sharply during the term of the notes, which could result in you losing a significant portion or all of your principal amount at maturity. In addition, because the Fund is linked to a single asset, not a diverse basket or a broad-based index, the notes carry greater risk and may be more volatile than securities linked to the values of a diverse basket or a broad-based index. **Furthermore, ether has historically exhibited high price volatility relative to more traditional asset classes and has experienced extreme volatility in recent periods and may continue to do so, which may increase the volatility of the Fund.**

- **THE NOTES ARE SUBJECT TO RISKS RELATING TO ETHER AND THE ETHEREUM NETWORK —**

The Fund offers exposure to ether. Ether is a digital asset designed to act as a medium of exchange and does not represent legal tender. Use of ether in the retail and commercial marketplace is relatively limited. Ether generally operates without central authority or banks and is not backed by any government or organized governing body. Digital assets such as ether are new and novel products, and their value is influenced by a wide variety of factors that are uncertain and difficult to evaluate. Information about ether holdings is limited, as ownership of ether is semi-anonymous and the supply of accessible ether is unknown.

Ether is an emerging asset class, and regulation in the United States is still developing, including with respect to market integrity, anti-fraud, anti-manipulation, cybersecurity, surveillance and anti-money laundering. Federal, state and/or foreign governments may restrict the use and exchange of ether and any such regulatory actions may adversely affect the value of ether. Ether and the ethereum network face significant challenges to scaling. Ether has been and may continue to be subject to extreme market volatility.

Competition from other digital assets or so-called "central bank digital currencies" could adversely affect the value of ether. Political or economic crises may motivate large-scale sales of ether, which could result in a reduction in the prices of ether and adversely affect an investment in the notes. Concerns about the perceived or actual environmental or other risks associated with, or bad publicity regarding, ether may lead to decreased participation in the ethereum network or decreased interest in or use of ether, which could adversely affect the value of ether and therefore the value of and return on the notes. The value of ether may fall sharply, and potentially to zero, causing you to lose a significant portion or all of your principal amount at maturity. If ether continues to be subject to sharp fluctuations, the Fund and the notes may be adversely affected.

The value of ether could be adversely affected by the actions of ether validators. Your investment in the notes could also be adversely affected by a temporary or permanent "fork" (or "split") of the ethereum network and the blockchain, with one version running pre-modified software and the other running modified software. Even when held indirectly, investment vehicles like the Fund may be affected by the high volatility associated with ether exposure. Ether is susceptible to theft, loss, destruction and fraud.

Ether exchanges and other trading venues on which ether trades are also relatively new and, in most cases, largely unregulated and may therefore be more exposed to operational problems, fraud and failure than established, regulated exchanges for securities, derivatives and other currencies. Ether exchanges may stop operating or permanently shut down due to fraud, technical glitches, internet disruptions, hackers or malware (e.g., intentional network attacks), which may also affect the price of ether. Events that negatively affect ether may negatively affect the performance of the Fund and the notes.

Ether trading relies on new technologies that may be exposed to operational problems. For example, smart contracts, including those relating to decentralized finance applications, are a new technology and their ongoing development and operation may result in problems, which could reduce the demand for ether or cause a wider loss of confidence in the ethereum network, either of which could have an adverse impact on the value of ether.

- **LIMITED TRADING HISTORY —**

The Fund commenced trading on The Nasdaq Stock Market on July 23, 2024 and therefore has limited historical performance. Accordingly, historical information for the Fund is available only since that date. Past performance should not be considered indicative of future performance.

- **THE ANTI-DILUTION PROTECTION FOR THE FUND IS LIMITED —**

The calculation agent will make adjustments to the Share Adjustment Factor for certain events affecting the shares of the Fund. However, the calculation agent will not make an adjustment in response to all events that could affect the shares of the Fund. If an event occurs that does not require the calculation agent to make an adjustment, the value of the notes may be materially and adversely affected.

The Fund

The Fund is an exchange-traded fund that seeks to reflect generally the performance of the price of ether before the payment of its expenses and liabilities. The assets of the Fund consist primarily of ether held by the ether custodian on behalf of the Fund. For additional information about the Fund, see “Fund Descriptions — The iShares® Ethereum Trust ETF” in the accompanying underlying supplement.

Historical Information

The following graph sets forth the historical performance of the Fund based on the weekly historical closing prices of one share of the Fund from July 26, 2024 through April 24, 2026. The Fund commenced trading on The Nasdaq Stock Market on July 23, 2024 and therefore has limited historical performance. The closing price of one share of the Fund on April 29, 2026 was \$16.85. We obtained the closing prices above and below from the Bloomberg Professional® service (“Bloomberg”), without independent verification. The closing prices above and below may have been adjusted by Bloomberg for actions taken by the Fund, such as stock splits.

The historical closing prices of one share of the Fund should not be taken as an indication of future performance, and no assurance can be given as to the closing price of one share of the Fund on the Pricing Date, the Review Date or the Observation Date. There can be no assurance that the performance of the Fund will result in the return of any of your principal amount.

Tax Treatment

You should review carefully the section entitled “United States Federal Taxation” in the accompanying prospectus supplement. The following discussion, when read in combination with that section, constitutes the full opinion of our special tax counsel, Davis Polk & Wardwell LLP, regarding the material U.S. federal income tax consequences of owning and disposing of notes.

Based on current market conditions, in the opinion of our special tax counsel it is reasonable to treat the notes as “open transactions” that are not debt instruments for U.S. federal income tax purposes, as more fully described in “United States Federal Taxation — Tax Consequences to U.S. Holders — Program Securities Treated as Prepaid Financial Contracts That are Open Transactions” in the accompanying prospectus supplement. Assuming this treatment is respected, subject to the possible application of the “constructive ownership” rules, the gain or loss on your notes should be treated as long-term capital gain or loss if you hold your notes for more than a year, whether or not you are an initial purchaser of notes at the issue price. The notes could be treated as “constructive ownership transactions” within the meaning of Section 1260 of the Code, in which case any gain recognized in respect of the notes that would otherwise be long-term capital gain and that was in excess of the “net underlying long-term capital gain” (as defined in Section 1260) would be treated as ordinary income, and a notional interest charge would apply as if that income had accrued for tax purposes at a constant yield over your holding period for the notes. Our special tax counsel has not expressed an opinion with respect to whether the constructive ownership rules apply to the notes. Accordingly, U.S. Holders should consult their tax advisers regarding the potential application of the constructive ownership rules.

The IRS or a court may not respect the treatment of the notes described above, in which case the timing and character of any income or loss on your notes could be materially and adversely affected. In addition, in 2007 Treasury and the IRS released a notice requesting comments on the U.S. federal income tax treatment of “prepaid forward contracts” and similar instruments. The notice focuses in particular on whether to require investors in these instruments to accrue income over the term of their investment. It also asks for comments on a number of related topics, including the character of income or loss with respect to these instruments; the relevance of factors such as the nature of the underlying property to which the instruments are linked; the degree, if any, to which income (including any mandated accruals) realized by non-U.S. investors should be subject to withholding tax; and whether these instruments are or should be subject to the constructive ownership regime described above. While the notice requests comments on appropriate transition rules and effective dates, any Treasury regulations or other guidance promulgated after consideration of these issues could materially and adversely affect the tax consequences of an investment in the notes, possibly with retroactive effect. You should consult your tax adviser regarding the U.S. federal income tax consequences of an investment in the notes, including the potential application of the constructive ownership rules, possible alternative treatments and the issues presented by this notice.

The Estimated Value of the Notes

The estimated value of the notes set forth on the cover of this pricing supplement is equal to the sum of the values of the following hypothetical components: (1) a fixed-income debt component with the same maturity as the notes, valued using the internal funding rate described below, and (2) the derivative or derivatives underlying the economic terms of the notes. The estimated value of the notes does not represent a minimum price at which JPMS would be willing to buy your notes in any secondary market (if any exists) at any time. The internal funding rate used in the determination of the estimated value of the notes may differ from the market-implied funding rate for vanilla fixed income instruments of a similar maturity issued by JPMorgan Chase & Co. or its affiliates. Any difference may be based on, among other things, our and our affiliates’ view of the funding value of the notes as well as the higher issuance, operational and ongoing liability management costs of the notes in comparison to those costs for the conventional fixed income instruments of JPMorgan Chase & Co. This internal funding rate is based on certain market inputs and assumptions, which may prove to be incorrect, and is intended to approximate the prevailing market replacement funding rate for the notes. The use of an internal funding rate and any potential changes to that rate may have an adverse effect on the terms of the notes and any secondary market prices of the notes. For additional information, see “Selected Risk Considerations — Risks Relating to the Estimated Value and Secondary Market Prices of the Notes — The Estimated Value of the Notes Is Derived by Reference to an Internal Funding Rate” in this pricing supplement.

The value of the derivative or derivatives underlying the economic terms of the notes is derived from internal pricing models of our affiliates. These models are dependent on inputs such as the traded market prices of comparable derivative instruments and on various other inputs, some of which are market-observable, and which can include volatility, interest rates and other factors, as well as assumptions about future market events and/or environments. Accordingly, the estimated value of the notes is determined when the terms of the notes are set based on market conditions and other relevant factors and assumptions existing at that time.

The estimated value of the notes does not represent future values of the notes and may differ from others’ estimates. Different pricing models and assumptions could provide valuations for the notes that are greater than or less than the estimated value of the notes. In addition, market conditions and other relevant factors in the future may change, and any assumptions may prove to be incorrect. On future dates, the value of the notes could change significantly based on, among other things, changes in market conditions, our or JPMorgan Chase & Co.’s creditworthiness, interest rate movements and other relevant factors, which may impact the price, if any, at which JPMS would be willing to buy notes from you in secondary market transactions.

The estimated value of the notes will be lower than the original issue price of the notes because costs associated with selling, structuring and hedging the notes are included in the original issue price of the notes. These costs include the selling commissions paid to JPMS and other affiliated or unaffiliated dealers, the projected profits, if any, that our affiliates expect to realize for assuming risks inherent in hedging our obligations under the notes, the estimated cost of hedging our obligations under the notes and the fees, if any, paid for third-party data analytics and/or electronic platform services. Because hedging our obligations entails risk and may be influenced by market forces beyond our control, this hedging may result in a profit that is more or less than expected, or it may result in a loss. A portion of the profits, if any, realized in hedging our obligations under the notes may be allowed to other affiliated or unaffiliated dealers, and we or one or more of our affiliates will retain any remaining hedging profits. See “Selected Risk Considerations — Risks Relating to the Estimated Value and Secondary Market Prices of the Notes — The Estimated Value of the Notes Will Be Lower Than the Original Issue Price (Price to Public) of the Notes” in this pricing supplement.

Secondary Market Prices of the Notes

For information about factors that will impact any secondary market prices of the notes, see “Risk Factors — Risks Relating to the Estimated Value and Secondary Market Prices of the Notes — Secondary market prices of the notes will be impacted by many economic and market factors” in the accompanying product supplement. In addition, we generally expect that some of the costs included in the original issue price of the notes will be partially paid back to you in connection with any repurchases of your notes by JPMS in an amount that will decline to zero over an initial predetermined period. These costs can include selling commissions, projected hedging profits, if any, and, in some circumstances, estimated hedging costs, our internal secondary market funding rates for structured debt issuances and the fees paid for third-party data analytics and/or electronic platform services. This initial predetermined time period is intended to be the shorter of six months and one-half of the stated term of the notes. The length of any such initial period reflects the structure of the notes, whether our affiliates expect to earn a profit in connection with our hedging activities, the estimated costs of hedging the notes and when these costs are incurred, as determined by our affiliates. See “Selected Risk Considerations — Risks Relating to the Estimated Value and Secondary Market Prices of the Notes — The Value of the Notes as Published by JPMS (and Which May Be Reflected on Customer Account Statements) May Be Higher Than the Then-Current Estimated Value of the Notes for a Limited Time Period” in this pricing supplement.

Supplemental Use of Proceeds

The notes are offered to meet investor demand for products that reflect the risk-return profile and market exposure provided by the notes. See “Hypothetical Payout Profile” and “How the Notes Work” in this pricing supplement for an illustration of the risk-return profile of the notes and “The Fund” in this pricing supplement for a description of the market exposure provided by the notes.

The original issue price of the notes is equal to the estimated value of the notes plus the selling commissions paid to JPMS and other affiliated or unaffiliated dealers, plus (minus) the projected profits (losses) that our affiliates expect to realize for assuming risks inherent in hedging our obligations under the notes, plus the estimated cost of hedging our obligations under the notes, plus the fees, if any, paid for third-party data analytics and/or electronic platform services.

Additional Terms Specific to the Notes

You may revoke your offer to purchase the notes at any time prior to the time at which we accept such offer by notifying the applicable agent. We reserve the right to change the terms of, or reject any offer to purchase, the notes prior to their issuance. In the event of any changes to the terms of the notes, we will notify you and you will be asked to accept such changes in connection with your purchase. You may also choose to reject such changes, in which case we may reject your offer to purchase.

You should read this pricing supplement together with the accompanying prospectus, as supplemented by the accompanying prospectus supplement relating to our Series A medium-term notes of which these notes are a part, and the more detailed information contained in the accompanying product supplement and the accompanying underlying supplement. This pricing supplement, together with the documents listed below, contains the terms of the notes and supersedes all other prior or contemporaneous oral statements as well as any other written materials including preliminary or indicative pricing terms, correspondence, trade ideas, structures for implementation, sample structures, fact sheets, brochures or other educational materials of ours. You should carefully consider, among other things, the matters set forth in the “Risk Factors” sections of the accompanying prospectus supplement and the accompanying product supplement, as the notes involve risks not associated with conventional debt securities. We urge you to consult your investment, legal, tax, accounting and other advisers before you invest in the notes.
